

HOUSING OFFICE
DEAN OF STUDENTS

DAVIS, CALIFORNIA 95616

May 25, 1971

Dear Sir:

The University of California at Davis would like to build, by fall 1971, experimental housing for 30 students. Do you design, build, or make components for housing of the following description:

1. House designed for two people.
2. Low cost - so that the entire project, including 15 houses, sanitary and kitchen facilities, and site development, could be built for under \$2,000 per house.
3. Portable, or light enough so the houses could be moved easily to another site.
4. Easy to construct - so that in following years students could build their own houses according to the original design.

All of the above criteria are flexible except for the price ceiling. We would be open to having kitchen and/or sanitary facilities located in a few utility modules rather than in each house.

If you cannot supply us with such housing, do you know of anyone who can?

We would greatly appreciate a prompt reply as we are rushed for time here.

Thank you,

A handwritten signature in blue ink that reads "Herb Koplowitz".
